Assignment

Module 2.1 Overview of Peripherals Theory

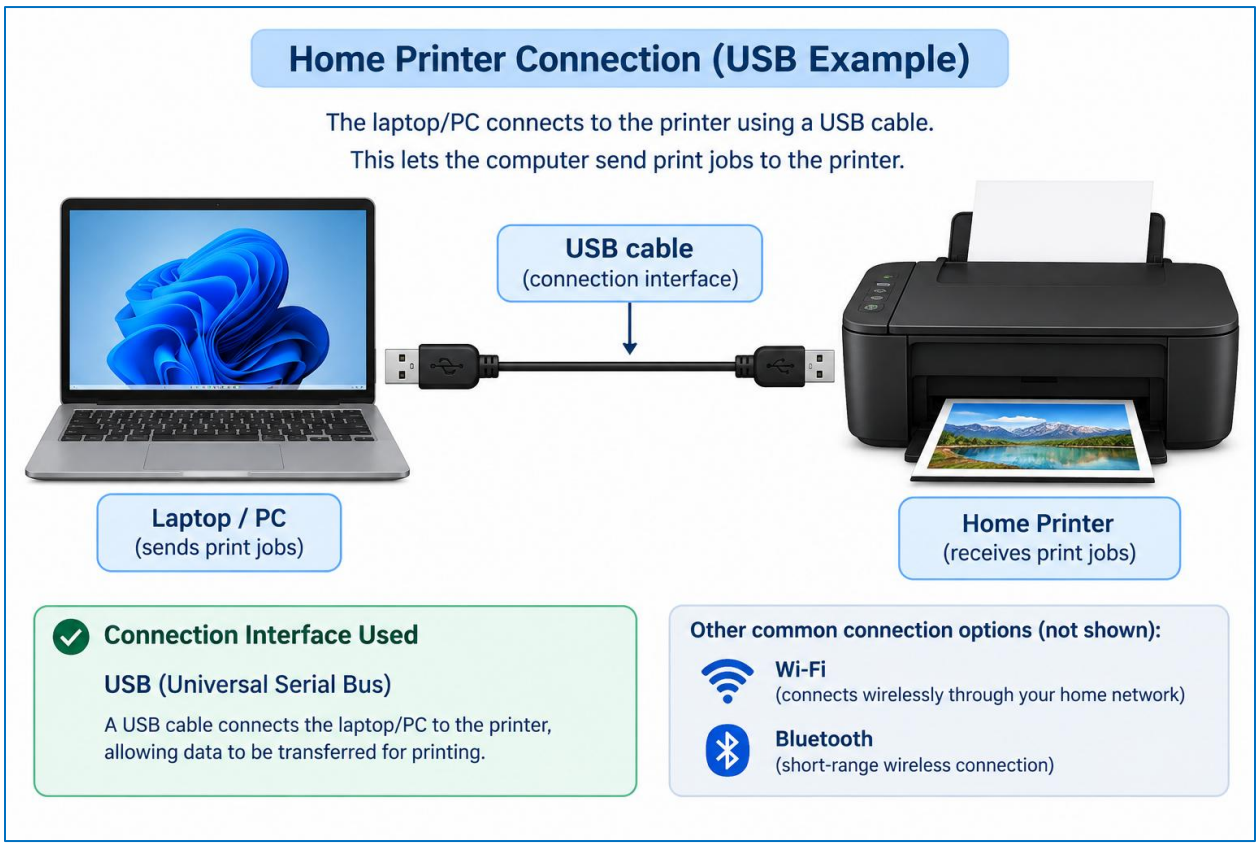

1. **Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').**

➢

Device	Type	Real-life use case
Printer	Inkjet printer	Printing school project pictures
Printer	Laser printer	Printing railway tickets at a booking counter
Printer	3D printer	Creating a small model for a science project
Scanner	Flatbed scanner	Scanning a student's certificate
Scanner	Handheld scanner	Scanning a barcode in a shop
Webcam	Built-in webcam	Talking to family members through a video call
Webcam	External USB webcam	Recording videos for an online tutorial

2. **Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).**

➢

3. **List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility. **

➢

Connection Interface	Advantage	Disadvantage
USB	Offers a quick and dependable connection	Needs a cable to connect
Wi-Fi	Provides a convenient wireless connection for multiple devices	May become slow or unstable with a weak signal
Bluetooth	Allows easy wireless connection over a short distance	Has limited range and is slower than USB

4. **Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.**

➢

Procedure for Connecting a Wireless Printer to a Computer:

Step 1: Power on the printer and ensure that it is connected to a stable electrical supply.

Step 2: Access the printer's **network configuration settings** and connect it to the required Wi-Fi network using the correct SSID and password.

Step 3: On the computer, open **System Settings** and navigate to **Printers & Devices**.

Step 4: Select **Add Printer or Scanner** to initiate the device-discovery process.

Step 5: From the list of detected devices, select the appropriate wireless printer.

Step 6: Install the required **printer drivers and supporting software** if they are not automatically installed.

Step 7: Configure the printer as the **default printing device**, if required.

Step 8: Send a **test print job** to verify network connectivity and confirm that the printer is functioning correctly.
