Assignment

Module 2.5 Operating System and information

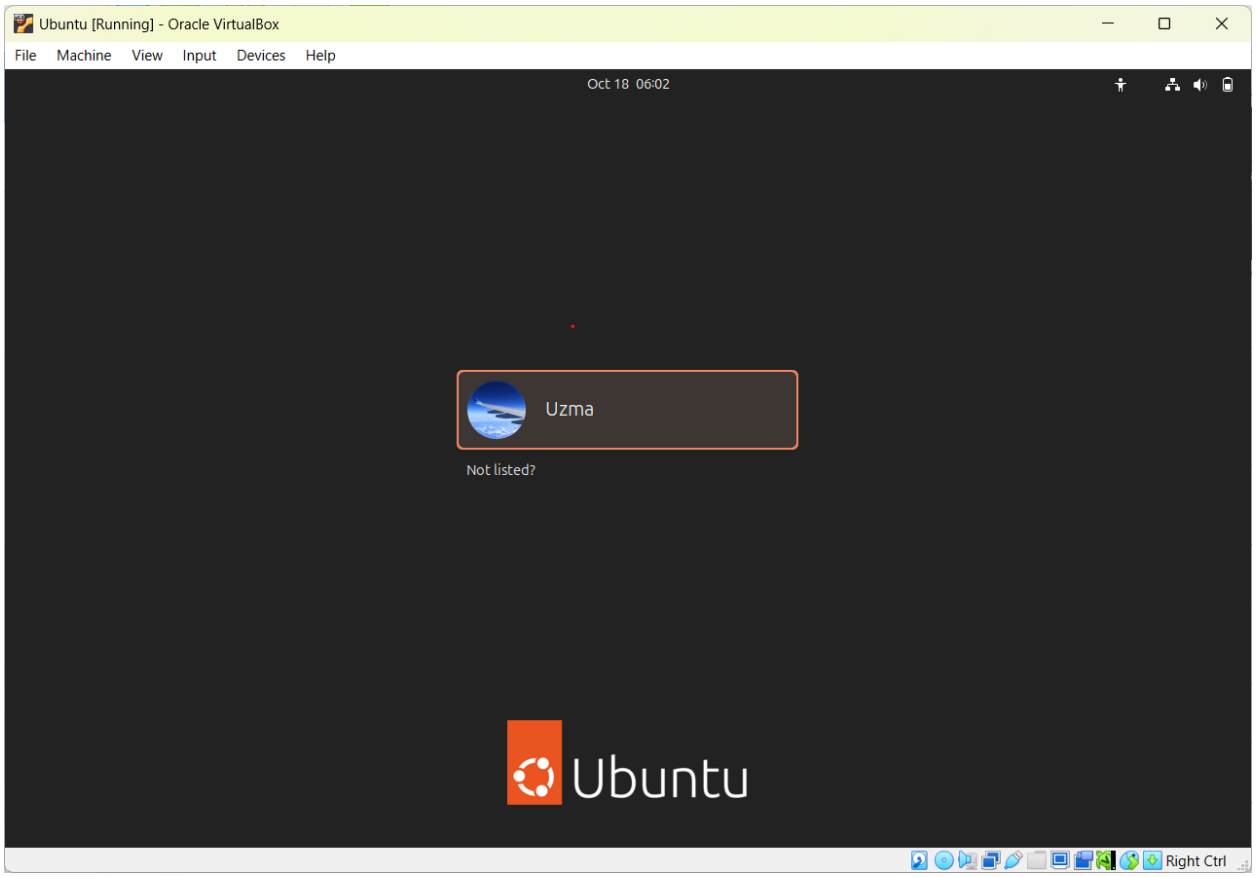

1. **On your windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.**

➢

2. **Download any official Linux distribution ISO (like Ubuntu or Fedora) and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

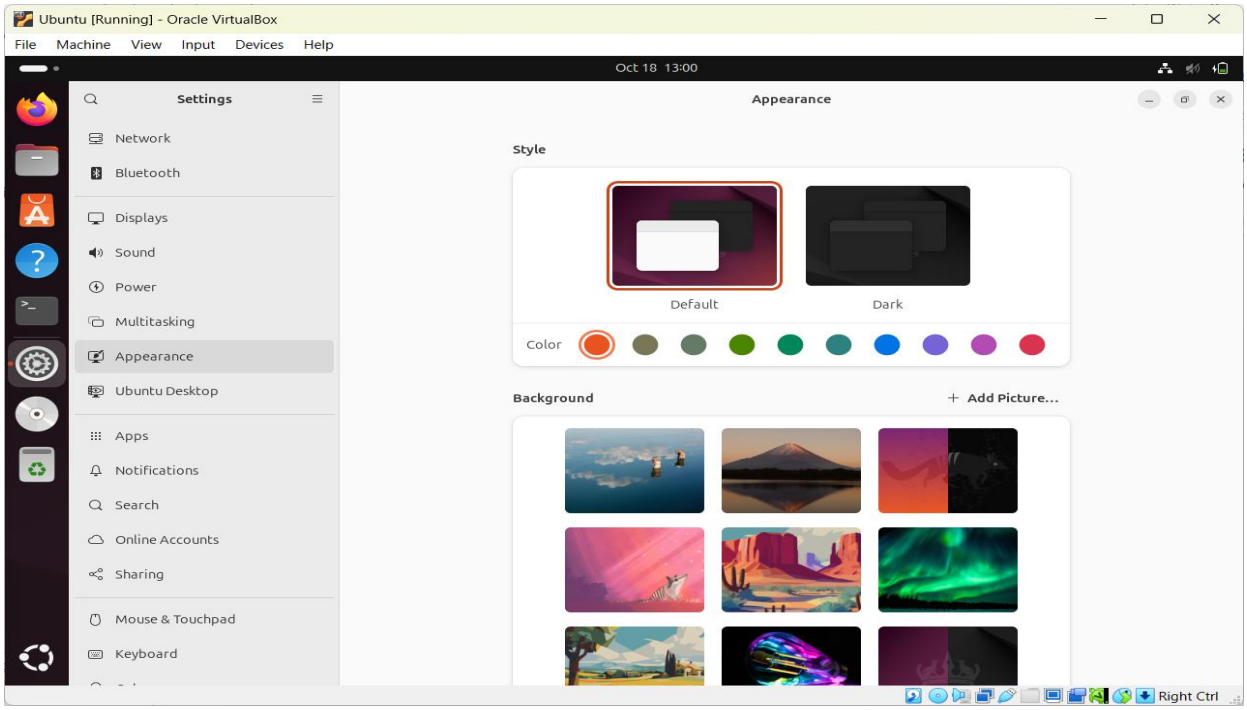

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually. **

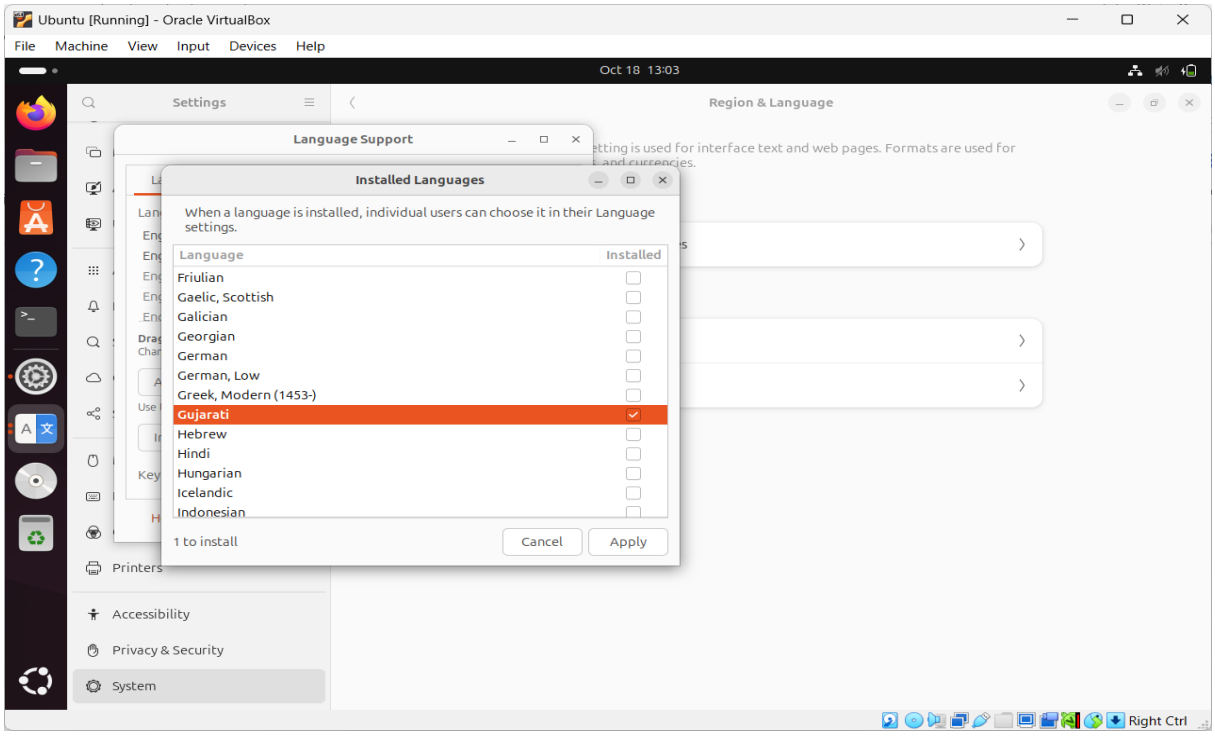

➢ 

3. **On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

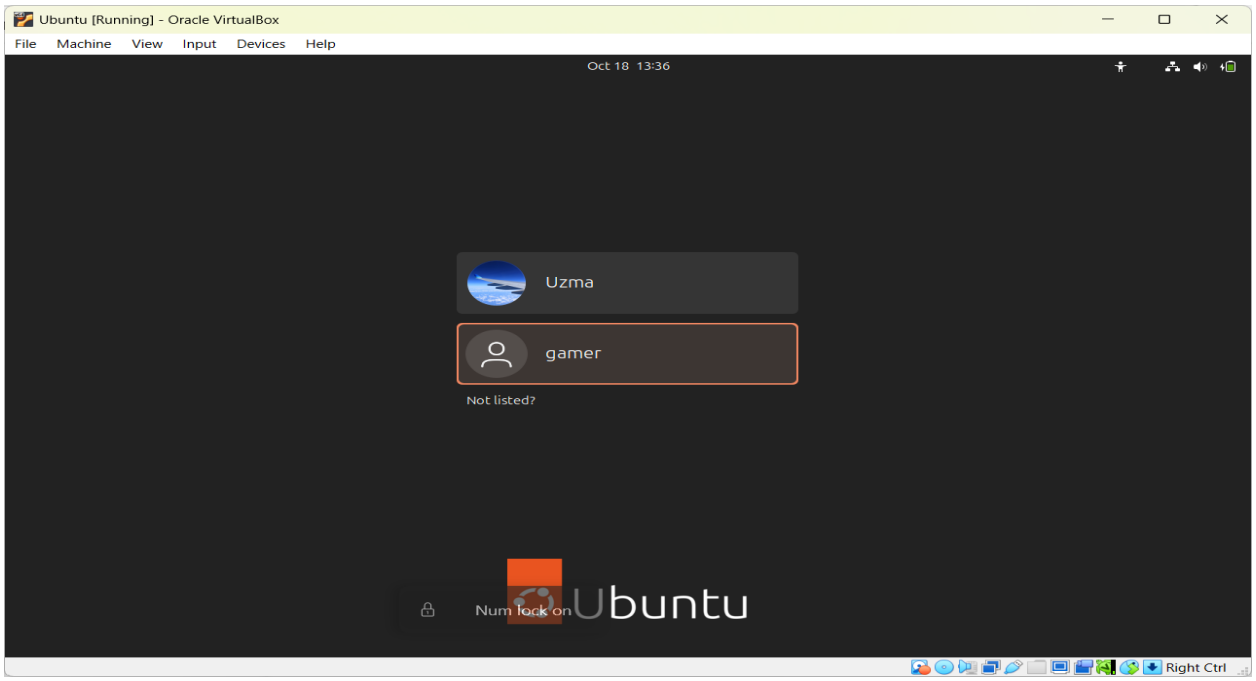

Hint: Find 'Language & Region' in System Preferences to add or change languages. **

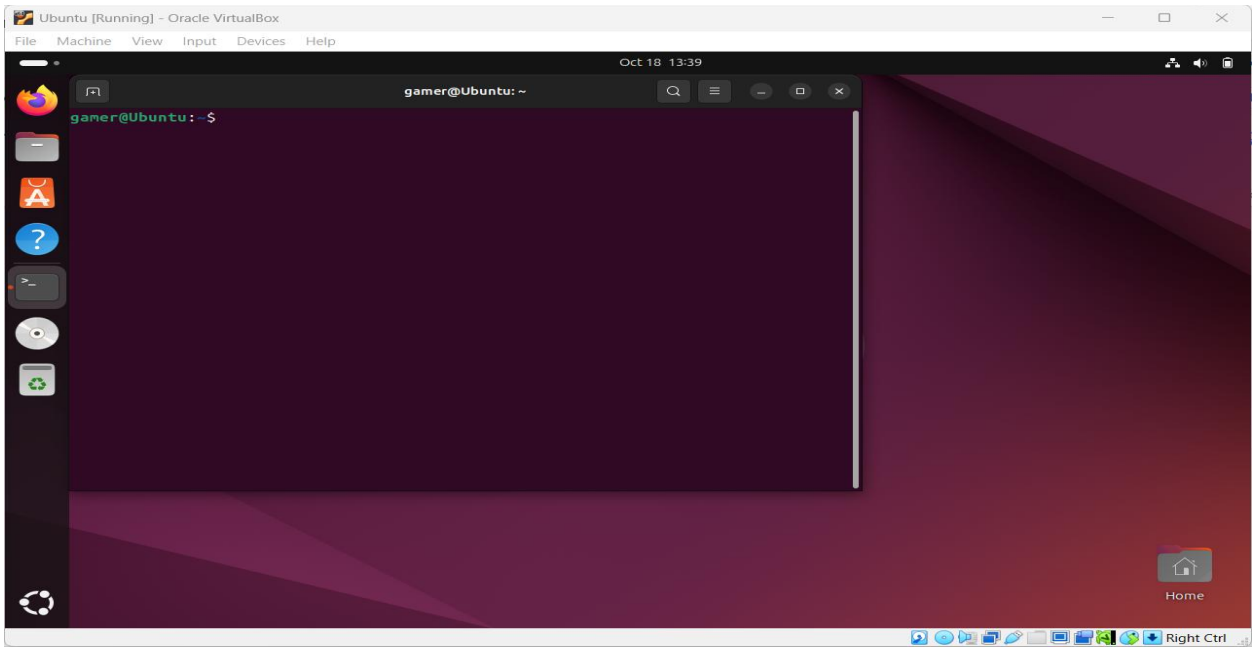

➢ My machine is not supporting macOS installation in virtual machine as well so I am doing this assignment in ubuntu Linux .

4. **Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.**

➢ 

➢ 

5. **Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.**

➢ **Step-by-Step Installation Guide**

Prepare the installation media:

Download the Windows 10 ISO file from Microsoft's website and create a bootable USB drive with at least 8 GB of storage. Back up all important files before starting.

Boot from the USB drive:

Insert the USB drive into the laptop, restart it, and open the boot menu using the appropriate key. Select the USB drive to start Windows Setup.

Start Windows installation:

Choose the language, time format, and keyboard layout. Click Install now, enter the product key if required, and accept the license terms.

Select the installation type:

Choose Custom: Install Windows only (advanced) to perform a clean installation.

Create disk partitions:

Select the appropriate disk and partition. For a new or empty drive, choose an unallocated space and click Next. Windows will create the necessary system partitions automatically. Back up important data before deleting or formatting existing partitions.

Complete the installation:

Wait while Windows copies files and installs its components. The laptop will restart several times during the process.

Configure initial settings:

Select the region, keyboard layout, and network connection. Create a user account and set a strong password or PIN.

Configure privacy settings:

Open Settings → Privacy and review location access, diagnostic data, advertising ID, camera, and microphone permissions. Disable unnecessary permissions to protect personal information.

Install updates and drivers:

Open Settings → Update & Security → Windows Update and check for available updates. Install the necessary hardware drivers from the laptop manufacturer's website.

Verify the installation:

Check that Wi-Fi, sound, the keyboard, touchpad, and other devices work correctly. Confirm Windows activation and ensure that important applications run properly.

- **Notes on Unclear or Missing Steps**

  While following the guide, I would pay attention to these points:

  The boot menu key differs between laptop manufacturers.

  The appropriate partition sizes depend on the storage capacity and personal requirements.

  Deleting or formatting partitions can erase important data.

  Some laptops may require additional drivers to recognize the storage drive or connect to Wi-Fi.

  Privacy options may vary depending on the Windows version.

  Windows 10 reached the end of standard support on October 14, 2025, so its current security support status must be considered before installation.

- **Conclusion**

  The guide explains how to install Windows 10, create disk partitions, configure privacy settings, and install updates and drivers. The main precautions are to back up data, select the correct partition, verify activation, and check the laptop's hardware compatibility.
